mobile development with

Flash Lite

▶ check it out!

Present Technologies is committed to research and develop Flash Lite based applications focusing the simultaneous evolution of the mobile Flash platform and an ever-increasing array of devices that support the technology.

Our mobile products focus real world demands and concerns, building upon a growing knowledge, creativity and intensive experimentation.

As the Flash Lite platform proliferates in the handheld market and phones increase their processing power, we are keeping a constant eye in scaling correctly our applications for already available devices and new, upcoming ones.

Using Adobe's Flash Lite, we are now adding a refreshing and valuable new user experience to mobile applications and leveraging networking capabilities between enabled devices.

Our products allow multiple users interacting through network services using a Flash based front-end on each handheld.

The Future is *Present*...

## ▶ our latest Flash Lite developments

### ● mPoker

#### Multiplayer poker game for Flash Lite enabled phones

Upon logging in, players can choose from a list of available poker tables, participate in various - play & real money - games at the same time or simply *sitout* and watch a hand taking place by fellow online players.

All of this, from a phone, enabling users to interact all over the globe: in real-time.

mPoker represents one of our most promising products in scaling a game for a wide mobile audience of players, using already available devices in today's consumer market panorama.

mPoker also features:

- ▶ a classy and embracing design;
- ▶ sound & vibration effects;
- ▶ personal avatars for players;
- ▶ integration with different server systems.

### ● Offside

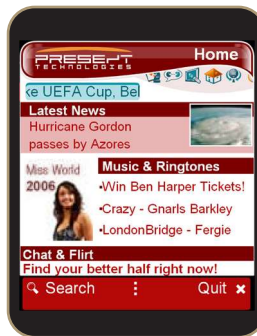

#### Flash Lite soccer league tracking application

With a phone, users can track almost every aspect concerning the current soccer season. This includes: live games, news, team scores, game outcome and results, goals, players and stadium information. Viewing a game's goals with video on-demand has also been applied to this mobile application.

### ● Content Delivery front-ends

#### Valuable experience and scalability know-how

Present Technologies began to apply Flash Lite technology building front-ends and gaining an invaluable experience in producing quality client interfaces for large dynamic content management & delivery systems already deployed and serving over 50 million users.
